

QUALITY ENGINEERING

APPRENTICESHIP

During your Quality Engineering apprenticeship you will learn the procedural, technical, administrative and customer facing skills and aspects of Automotive Quality Control & Assurance in our fast-paced Automotive Manufacturing sector.

Your technical training will start with core engineering skills including the use of conventional machinery (mill, drill, lathe, grinder) and computer numerically controlled machinery (CNC).

Your Quality biased technical training will continue with instruction on CMM (Coordinate Measuring Machine), Macro weld testing test and 3D scanning equipment. You will also become proficient in material testing the physical properties of a wide range of metals and develop automotive problem-solving skills

Training in Quality Management systems (TS16949) and liaison with customers such as, TESLA, TOYOTA, BMW and JAGUAR LANDROVER on new model and current production quality control. An exciting, challenging and wide ranging engineering role. Shift work may be required

Places on our apprenticeships are limited so we would urge you to send a CV and covering letter to us detailing why you are interested in building a career in engineering, what your understanding is of Automotive Quality and why Quality Engineering is the best route for yourself.

To become a G-TEKT apprentice you must be aged 16-24 and have 5 x GCSE's at Grade C or above including Maths, English & ICT

Our 4 year apprenticeship combines on-the-job training and academic studies at one of our local colleges. Year 1 will be off site training at GET. During year 2-4, your academic qualifications will continue onto HNC level via a day release program. We encourage our Quality Engineers to continue their academic pathway beyond HNC level to consider onward progress toward Degree level.

- BTEC Level 3 Extended Diploma in Mechanical Engineering
- NVQ Level 2 in Performing Engineering Operations
- City & Guilds Level 3 Diploma in Engineering Inspection, Quality Control and Assurance
