Role Description

In this role you would be working in a fast-paced, manufacturing environment, producing automotive components in a press or weld environment. This involves lifting and moving components in a repetitive nature. Along with this you would be responsible for ensuring all quality checks are carried out on components up to our standards and procedures, then pack the components into stillages with correct labelling.

Role Duties

- Operate robotic welding equipment by loading and unloading press components to achieve hourly build targets to meet customer requirements.
- Ensuring all quality checks are completed on components, ensuring these are carried out to our quality standards and procedures.
- Pack components into stillage's ensuring they are correctly labelled.
- Reporting of faults to team leader to minimise downtime.
- Basic TPM to be carried out.

- Accurate completion of production paperwork.
- Supporting 5s activities within the department.

Employee Benefits

- 25 days holiday + bank holidays (fixed holidays in-line with our customers).
- Overtime available based on company demand.
- Monday to Friday working.
- Learning and progression opportunities within company.
- Shift premiums payable.
- Workwear & PPE provided.
- Free on-site parking.
- Free eye test vouchers.
- Employee referral program.
